

AMIR DANISH

Junior Web Developer | Ipoh, Perak | seeker01@jobmatch.test

PROFESSIONAL SUMMARY

Entry-level web developer with a fictional Diploma in Information Technology profile and practical coursework in HTML, CSS, JavaScript, PHP and responsive web design. Interested in building accessible, mobile-friendly interfaces, implementing basic server-side features and testing user-facing functionality. Seeking an internship or junior position to strengthen full-stack development skills.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript fundamentals, responsive layouts, semantic HTML and basic form validation.

Backend and data: PHP fundamentals, form handling, introductory MySQL queries and CRUD concepts.

Development practices: Browser developer tools, basic debugging, reusable page components, manual testing and introductory Git version control.

Soft skills: Teamwork, documentation, communication, time management and attention to detail.

EDUCATION

Diploma in Information Technology | Fictional academic profile

Relevant coursework: Web Programming, Database Fundamentals, Programming Principles, Systems Analysis and Human-Computer Interaction.

SELECTED PROJECT EXPERIENCE

Responsive Student Event Portal | Academic project

- Developed a multipage student event portal using HTML, CSS, JavaScript and PHP.
- Created responsive layouts for event listings, registration forms and event details across desktop and mobile screen sizes.
- Implemented client-side input checks and basic PHP form processing, then tested common invalid-input scenarios.

Personal Portfolio Website | Portfolio exercise

- Built a portfolio with project summaries, navigation links and a contact form mock-up using semantic HTML and CSS.
- Adjusted layout spacing, typography and navigation for smaller screens.

Simple Task Tracker | Coursework simulation

- Created a JavaScript interface for adding, marking and filtering sample tasks.
- Practised event handling, DOM updates and basic browser debugging.

PRACTICAL KNOWLEDGE

- Can explain how frontend pages interact with backend request handling at an introductory level.
- Understands why readable layouts, input validation and testing matter for user experience.
- Able to document implementation steps and reproduce interface bugs using sample test cases.

CAREER OBJECTIVE

To contribute to a web development team through interface implementation, testing and documentation while gaining experience with production workflows and database-backed applications.

FICTIONAL SAMPLE RESUME - JOBMATCH PILOT TESTING ONLY. All personal, academic and project details are invented and are not verified credentials.
